**Abstract of JP2002441**

**PURPOSE:**To make it possible to add and change a terminating subscriber to be connected without changing a program and to easily form the program by allowing an OS to hold a communication control network management table so as to control it.

**CONSTITUTION:**The communication control network management table 3 stores a name, a telephone number, the name of an operator to be accessed, a group identification(ID) number required at the time of forming a network, etc., in each terminating subscriber and these contents can be optionally changed.

Application 1 is a program for executing communication work to plural subscribers and outputs a calling request to a communication control mechanism in the OS 2. The mechanism 20 displays the name of the terminating subscriber by a menu method on the basis of the table 3 within a range that access to a user starting the application 1 is allowed. Operator executes a call to the user selected.
